

## PROCESSED CHEESES

Processed cheeses are quite common in the USA and are made from cheeses of various types and other unfermented milk derivatives, salt, preservatives and emulsifiers are added and there are some flavored and colored cheeses.

Processed cheeses were invented in 1911 in Switzerland by Walter Gerber, but it was James Kraft who filed the US patent in 1916 and in 1950 his company Kraft launched in the USA the first pre-sliced packaged processed cheese ready for sandwiches.
